Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 4, 6, and 9-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Niemeyer et al. USPN 6822136.

As to claims 1, 2, 4, and 6, Niemeyer discloses a pants-type diaper for playing in water comprising a liquid permeable top sheet 48, a liquid impermeable sheet 46, and an absorber 50 intervening between the sheets, three-dimensional leg gathers 62, elastic stretch members 82 disposed on a waistband portion, and side portions 42 between the waistband portion and leg portions. Niemeyer further discloses a liquid permeable back sheet 70 made of nonwoven fabric disposed on an outermost surface of the main body. (Figures 1- 3).

As to claim 9, see col. 8, lines 39-41.

As to claims 10 and 11, see col. 9, lines 13-17.

As to claim 12, see col. 8, lines 5-15.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 5, 7, and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Niemeyer et al. USPN 6822136. Niemeyer discloses the present invention substantially as claimed. However, Niemeyer does not disclose the tightening force of the elastic stretch members, the pressure resistance of the nonwoven backsheet, the void volume of the housing pocket, and the amount of pulpwood in the absorber. Niemeyer teaches a disposable absorbent garment for use as swimwear. Niemeyer teaches the swimwear is designed for leakage prevention prior to swimming (col. 6, lines 4-5). Niemeyer teaches liquid absorption, but liquid permeability and forming the backsheet with slits or holes so it has reduced liquid resistance (col. 6, lines 4-19, col. 7, lines 33-12, col. 9, lines 22-37). Niemeyer teaches the general conditions of low moisture humidity between the absorber and backsheet, an absorbent but not highly swellable core, and leakage prevention cuffs that are resilient but capable of maintaining solid waste. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to article with the aforementioned claimed parameters since where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation, In re Aller et al. 105 USPQ 233.
